OFFICE PERFORMANCE COMMITMENT REPORT (OPCR)

I, Thomas W. Seay of the Department of Mathematics, Physics and Computer Science commit to deliver and agree to be rated on the attainment of the following targets in accordance with the indicated measures for the period February 2015 to April 2015.

Thomas W. Seay
Unit Head, DMPCS
Date: May 12, 2015

When the use case model is large (which is common for a large project), it is beneficial to create views of the use case model from the point of view of the different stakeholders. One such view is the architectural use case view, defined in the RUP [Kruchten 2000], which captures the use cases that are meaningful for determining the architecture. Other options for views include the use case identified per sub-system,

per development team, etc. In this respect, it is beneficial to use a requirement management tool that allows filtering and slicing the model to the different views (based on the different categories used).
